Kleursysteem notaties

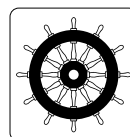

NCS® en RAL Classic notaties geven de dichtstbijzijnde overeenkomst weer die beschikbaar is in het specifieke systeem. Ze kunnen al dan niet exact zijn en worden enkel ter informatie gegeven. NCS en RAL Classic notaties zijn vastgesteld op basis van een standaard mat HPL staal. Gelieve er rekening mee te houden dat verschillende oppervlakteafwerkingen (textuur en glansgraad) een effect kunnen hebben op de kleurwaarneming. Wanneer exacte kleurinformatie nodig is, of voor materiaalvergelijking (HPL met andere materialen), raadpleeg dan altijd een echt HPL staal in de aangegeven afwerking.

Lichtreflectiewaarde

De lichtreflectiewaarde (LRV) is een waarde die aangeeft hoeveel licht door een kleur wordt weerkaatst, gemeten onder standaard daglichtomstandigheden. In deze leidraad wordt een schaal van 0 - 100 gebruikt, waarbij 0 = zwart en dus totale lichtabsorptie, terwijl wit = 100 en dus totale lichtreflectie. Het hoofddoel van deze waarde is het gemeten kleurcontrast tussen twee oppervlakken aan te geven, die in een omgeving gemakkelijk van elkaar te onderscheiden moeten zijn (onder statische omstandigheden wordt een verschil van 30 eenheden tussen twee kleuren als voldoende beschouwd). Aangegeven LRV's kunnen al dan niet exact zijn en dienen slechts ter indicatie.

Let op

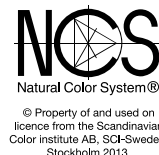

Voor dessins die bestaan uit meerdere kleuren, is de aangegeven LRV een gemiddelde waarde van meerdere metingen in het dessin, die met de nodige voorzichtigheid moet worden gehanteerd. De afzonderlijke kleuren in een dessin met een patroon, houtstructuur of steendecor kunnen meer dan 30 LRV-eenheden van elkaar verschillen binnen het dessin zelf.
